

iOS Coding task

Create an iPhone application that calls the following JSON API:

<https://api.spotify.com/v1/artists/36QJpDe2go2KgaRleHCDTp/albums?limit=50>

And displays within a UITableView the name and year of release of each album (the name should be more prominent) and a thumbnail of the cover.

Please use Objective-C and, most importantly, do NOT use ARC. Manual memory management only.

Do not use any third party code or library (no CocoaPods).

Notes: The goal of this test is to give us a picture of your knowledge and skills; so enjoy the task rather than worry about hitting a deadline or adding extra features.
